

ENHANCED DURABILITY MULTIMEDIA CARD

ABSTRACT OF THE INVENTION

[0035] A memory card comprising a leadframe having a plurality of contacts. Electrically connected to the leadframe is at least one semiconductor die. A body at least partially encapsulates the leadframe and includes opposed top and bottom surfaces, an opposed pair of longitudinal sides, and an opposed pair of lateral sides. The contacts of the leadframe are exposed in the bottom surface of the body and extend to one of the lateral sides thereof.
